Invitation

Human Factors Engineering in Medical Devices

By Greg Thay and Vaidotas Nenorta

THAY Medical is a Human Factors Engineering organisation. THAY's mission is to combine engineering, psychology and healthcare to help develop devices suited for the user needs. THAY Medical focus on the interaction between the user and the device – the human factors of the medical product and believe that a user-friendly interface reduces the occurrence of clinical errors in real life. As such, THAY think there is a benefit in applying the best human factors and usability engineering practices to the development of a device and post market surveillance.

First part of the session Greg Thay, the front man and the Director of THAY Medical will talk about what is Human Factors engineering as a discipline and where it stands in today's healthcare. In the second part Vaidotas Nenorta, Kaunas University of Technology Biomedical Engineering Masters degree graduate and a Human Factors engineer in THAY Medical will share his story and talk about the beauty and need of such discipline.

THAY Medical is looking to expand into Northern Europe and they need your help!

The presentation will be held on the 14th of February 2019 at 10:00 a.m.

Santakos slėnis K. Baršausko 59-228

A stylized, light gray illustration of two hands shaking, symbolizing agreement or partnership. The hands are positioned horizontally across the lower half of the page, with fingers interlaced in a firm grip.
